

The min, max and step attributes

These attributes are useful for several input types such

as number, range, date and time (and other variants).

The min and max attributes are used to set ranges to input fields that accept numerical values or a date/time.

Their detailed use with these input fields have already been explained in the different sections of this course dedicated to these particular input field types.

TYPICAL USE

```
<input id="mydate" name="mydate"
  type="date"
  min="2012-01-01"
  max="2013-01-01"
  value="2012-01-01"
/>
```

```
<input name="time" id="time" type="time"
  min="09:00"
  max="17:00"
  value="12:00"
/>
```

```
<input id="range" name="range" type="range" min="0" max="100" step="5"/>
```
