

Here is the discussion forum for this part of the course. You can post your comments and share your creations here, and of course ask questions.

Let us suggest some topics of discussion and optional projects:

SUGGESTED TOPICS

- Polyfills for features not supported by Safari and Internet Explorer?
- Did you find how to make stylish forms with CSS3? Would you please share good resources about form styling and layout?

OPTIONAL PROJECTS

Here are a few project ideas. Your classmates and the team who prepared the course will all be glad to try them and give some feedback. Please post URLs in this discussion forum. These projects are optional, meaning that they won't be graded.

- **Project 1 (easy):** add some sliders, color chooser to control one of the project you wrote for Week 3 and Week 4. Change the color, size, speed, rotation, etc. of you monster/chart/graphics. Make your demo a customizable Web app! Videos 1 and 2 are good starting points.
- **Project 2 (easy):** Provide an HTML5 form for registering in an imaginary forum. The form asks for a first name, a last name, an email, a phone number, a postal address, a password, etc. Please use as many features as possible, to put into action all the features described in this section of the course. If your form is long, regroup in fieldsets the different input elements. Look at the examples given in section 5.2.2, and also in the live coding video #3. Have a look at external resources at the end of section 5.2.4 (put sections, headings, etc. in a long form).
- **Project 3 (easy):** make it stylish!
- **Project 4 (a bit harder):** Same as above, but please include a way to add a picture using an input=file element or the webcam + canvas. We will discuss in the forum how we can add the image to the data the form will send once submitted.
