

The min, max and step attributes

These attributes are useful for several input types such as `number`, `range`, `date` and `time` (and other variants).

The `min` and `max` attributes are used to set ranges to input fields that accept numerical values or a date/time.

Their detailed use with these input fields has already been explained in the different sections of this course dedicated to these particular input field types.

TYPICAL USE

```
<input id="mydate" name="mydate"
  type="date"
  min="2012-01-01"
  max="2013-01-01"
  value="2012-01-01"
/>
```

10.

```
<input name="time" id="time" type="time"
  min="09:00"
  max="17:00"
  value="12:00"
/>
```

```
<input id="range" name="range" type="range" min="0" max="100" step="5"/>
```
