Further (suggested but not mandatory) reading

At W3C, the Web Accessibility Initiative (WAI) mission is to define guidelines widely regarded as the international standard for Web accessibility, support materials to help understand and implement Web accessibility, and a diverse set of helpful resources, through international collaboration.

For those who are curious and/or for future reference, please find below a few resources (all links go to the W3C WAI Web site):

- The document "How People with Disabilities Use the Web" describes how different disabilities affect Web use and includes scenarios of people with disabilities using the Web.

- The "Web Accessibility Tutorials" cover various accessibility topics, based on common tasks in Web projects.

- As seen on the previous page, the "Easy Checks" is a simple but useful checklist for validating the accessibility of Web pages (not full conformance evaluation).

- More resources, including business case, and implementation planning is available from the W3C WAI Web site.
